REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

While Rogers, Jr. et al disclose an actuator comprising a motor, a cam drivable by the motor, a cam follower, an output member connected to the cam follower, wherein powered rotation of the cam causes the cam follower to be radially displaced relative to the cam axis to provide first and second output positions of the output member, and wherein the cam has a radial stop, which in conjunction with the cam follower, act as a detent so that the cam follower is capable of controlling a position of the cam and Kachouh discloses a motor which moves an output member from a first and second output position, neither of these references taken either alone or in combination disclose that the motor is powered in a single direction to move the output member from the first output position to the second output position AND is driven in the same single direction to move the output member from the second output position to the first output position.

And as applicant states in his appeal brief, the motor disclosed by Kachouh, while it may be operable to move an output member from one position to another, it's structural incorporation into the device of Rogers, Jr. et al would rend the Rogers' actuator inoperable.

It is for these reasons that applicant's invention defines over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
